The Quark-Meson Coupling Model

Theo F. Motta (University of Adelaide) Strangeness in Neutron Stars

æ

イロト イロト イヨト イヨト

• The QMC model is one of the relativistic phenomenological models. What we want, fundamentally, is

 $\mathcal{L} = \bar{\Psi}_B (i\partial \!\!\!/ - M_B) \Psi_B + \mathcal{L}_{\text{mesons}} + \mathcal{L}_{\text{interactions}}$

• □ ▶ • @ ▶ • E ▶ • E ▶

• The QMC model is one of the relativistic phenomenological models. What we want, fundamentally, is

$$\mathcal{L} = ar{\Psi}_B (i \partial \!\!\!/ - M_B) \Psi_B + \mathcal{L}_{ ext{mesons}} + \mathcal{L}_{ ext{interactions}}$$

• However, we also want to retain some information on the *baryon structure*.

• The QMC model is one of the relativistic phenomenological models. What we want, fundamentally, is

$$\mathcal{L} = ar{\Psi}_B (i \partial \!\!\!/ - M_B) \Psi_B + \mathcal{L}_{ ext{mesons}} + \mathcal{L}_{ ext{interactions}}$$

- However, we also want to retain some information on the baryon structure.
- So before writing the baryon level lagrangian, let's take a look at the baryon structure, starting from a simple bag model perspective

• The QMC model is one of the relativistic phenomenological models. What we want, fundamentally, is

The Nature of Strangeness Puzzle

Theo F. Motta (University of Adelaide) Strangeness in Neutron Stars

July 14, 2021 16/21

æ

イロト イロト イヨト イヨト

• The QMC and other models have shown good agreement with masses and radii *including hyperons*

(B)

- The QMC and other models have shown good agreement with masses and radii *including hyperons*
- The Hyperon puzzle as it was first conceived of doesn't seem like too much of a puzzle anymore

- The QMC and other models have shown good agreement with masses and radii *including hyperons*
- The Hyperon puzzle as it was first conceived of doesn't seem like too much of a puzzle anymore
- However, one puzzle to be addressed is that of deconfinement.

17/21

- The QMC and other models have shown good agreement with masses and radii *including hyperons*
- The Hyperon puzzle as it was first conceived of doesn't seem like too much of a puzzle anymore
- However, one puzzle to be addressed is that of deconfinement.
- One interesting approach is to try the inverse problem, get NS constraints and from there infer what the EoS is. See Annala et al. [2020]

Figure: Results from Annala et al. [2020]

Strangeness in Neutron Stars	July 14, 2021	19/21

と周天 とうちょ

Conclusions

- The QMC model is in agreement with data
- There isn't much of a Hyperon puzzle anymore
- We still cannot discriminate between QM and Hyperonic matter
